

CCT-8 CALLPOINT CONTROLLER (Screw Terminals, Basic Version)

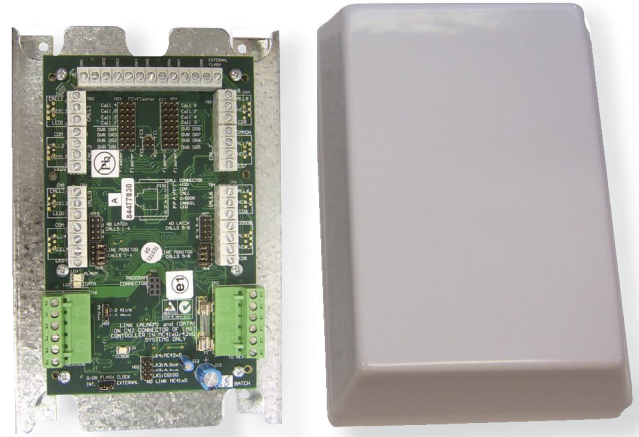

The CCT-8 is an 8 input electronic callpoint controller that links physical callpoints and Over Door Lights installed in rooms or other areas, with the nurse/staff station or central controller of an Austco nurse/staff call system (Variant of the CCG-8.)

Screw terminal inputs/outputs are provided to connect up to 8 call inputs from Austco's CPS-TBxx(P) screw terminal series of callpoints (with or without pendant) or other compatible callpoints. Each input/output provides lines for CALL, reassurance LED and CANCEL functioning of a callpoint.

Screw terminals are provided for connection of 8 Over Door Lights with selectable steady or flashing operation via on-board link settings.

Multiple callpoint controllers can be "daisy-chained" via a data bus to link up to 256 callpoints. The data bus type is on-site selectable during installation to be Austco propriety AustcoBus for retrofits to old installations; AustcoLink for new installations or AustcoLink Audio for use with two-way speech (audio) callpoint controllers (CCA-8).

The CCT-8 is supplied with metal surface mount base and slimline plastic cover.

CCT-8 CALLPOINT CONTROLLER
(Screw Terminals, Basic Version)

Features	Benefits
Simple unobtrusive automated controller.	Out of sight installation requiring no user operations or interventions.
On-board Over Door Light link settings.	Easy on-site selection of Over Door Light operation (steady/flashing) during installation.
Optional use of external Over Door Light flashing input or on-board flashing circuit.	Flash rates can be set to match any existing system.
Multiple call/alarm levels.	Level of call (bed, toilet, staff assist, emergency, etc.) can be independently programmed for each callpoint input.
Compatible with all existing Austco controllers.	Reduced cost, as all equipment is compatible with all existing installations. Allows upgrades and support of sites over ten years old.
Built-in fault monitoring capability.	Automatically detects and reports data bus faults.
Compatible with Cat 3 & Cat 5 cabling.	Suits structured cable plant installations.
Modern plastic encapsulated integrated unit.	Low maintenance and long life.
