

CCZ-CS1 ZONE CONTROLLER WITH CHIME SPEAKER (and Zone Light Outputs)

The CCZ-CS1 is a small flush wall mountable zone controller used to audio-visually announce active alarms/calls in a zone of an Austco nurse/staff call system by means of alert tone sounds and/or control of zone lights. Typically mounted in corridors and used as an alternative or in addition to Austco's AN series annunciator displays.

Incorporates a tone/chime circuit and speaker with on-board volume control, and an optional MUTE button, to provide distinctive active alarm/call alert tones for seven priority levels similar to that of the AN series annunciator display.

Controls and outputs are provided to drive three different (red, green & amber/ yellow) zone lights, with or without flashing, in accordance with the priority of the highest active call.

Each zone controller on a system is uniquely addressable to service a zone comprising of any number of rooms (or callpoints) so defined as part of the system's nurse/staff station or controller programming.

The CCZ-CS1 is supplied on a standard Austco callpoint plate fitted with speaker, grill and optional MUTE button, and with screw terminal connectors for connection of the display data bus, zone lights and optional external amplifier/chime speakers.

CCZ-CS1 ZONE CONTROLLER WITH CHIME SPEAKER (and Zone Light Outputs)

Features	Benefits
Simple, small and unobtrusive automated controller.	Out of sight installation requiring no user operations or interventions.
Audio active alarm/call alert tones.	Alerts staff to active calls with distinctive, loud and clear volume adjustable chime/tone sounds.
Over door light output.	Allows connection of zone or follow-me lights to indicate active calls.
Up to seven alarm/call priority levels.	Provides indication of different priority levels of call (patient, toilet, staff assist, emergency, etc.) in a zone to assist staff to provide quick appropriate response saving time and resources.
MUTE button and DAY/NIGHT mode.	Active alarm/call alert tones can be silenced (MUTE) or decreased in volume during night.
New modern modular connector design.	Inexpensive to install due to the simpler cabling and connector requirements.
Modern plastic integrated unit.	Low maintenance and long life.
