

- » Silicone callpoint features
- » Reassurance light
- » Two levels of call (priorities)
- » Combined callpoint and handset outlet
- » Attractive design using unbreakable plastic

## Entertainment Handset Outlet

The CPG-1EH0/BS is a combined CPG-1/BS callpoint and handset outlet for use with Austco's CAA-EEH Ergonomic Entertainment Handset to provide patient control of TV/music, lights, and nurse call functions (including two-way speech communications) on an Austco nurse/staff call system. The combined of callpoint and handset outlet eliminates the need for and cost of installing and wiring in callpoint and separate handset outlet.

## Easy to Identify and Use

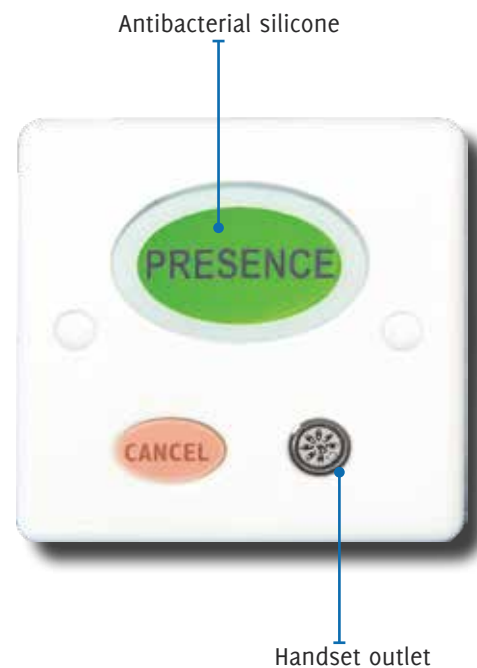

The callpoint features the same soft touch push button manufactured with anti-bacterium additive as per the CPG-1/BS with the addition of an 8-pin DIN socket to plug in a CAA-EEH handset. Call activation is by momentarily pressing the silicone call button (labelled with its function) or from the plug in handset.

The callpoint incorporates a separate CANCEL button that lights up bright red giving visual reassurance that a call has been placed. The handset socket also incorporates a handset removal alarm that activates a call common to that of the handset.

The CPS-1EH0/BS integrates with Austco's TV (AM-TV) and light (RLY-2) controllers for control of TV/music and lights from the buttons on the CAA-EEH handset.

## On-site Programming

The call button is available in a number of standard colours and labels for use as various levels of alarms or system inputs (as determined by a system's programming).
