

- » Wide range of clear, concise coloured labels
- » Flush antibacterial soft touch silicone buttons
- » Call latching with individual reassurance lamp
- » Gold plated button contacts
- » Pendant removal alarm

## Generic Callpoints

The CPG-1xx series are flush wall mountable callpoints with call button and optional pendant socket for use with Austco nurse/staff call systems to activate calls or input other conditions on the system. Call activation is by momentarily pressing the call button (labelled with its function) or from the optional plug in call pendant. Integrates with Austco's CPS-IML intercom module to provide a combined call/two-way speech point for audio communication between nurse and patient.

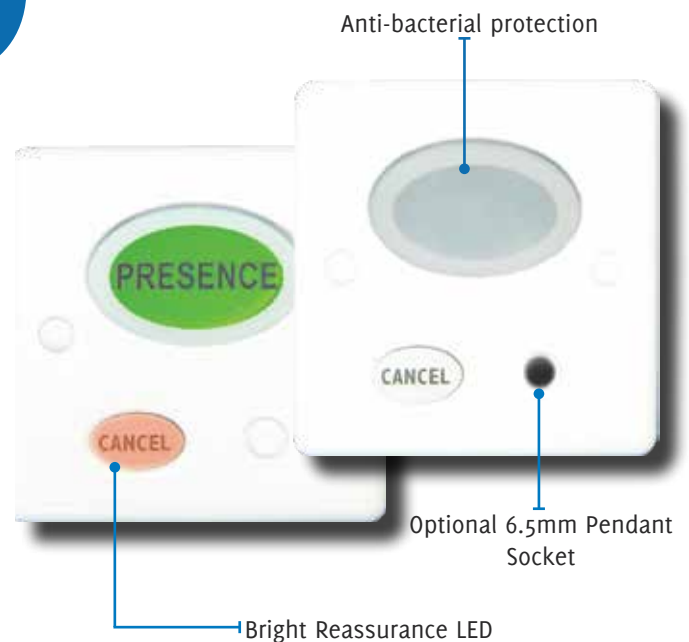

## Easy to Identify and Use

The call button features a soft touch push button with anti-bacterium additive as an infection control measure.

The callpoint incorporates a separate CANCEL button that lights up bright red giving visual reassurance that a call has been placed. In the case of parallel connected callpoints, the CPG-1xx incorporates on-board latching on the callpoint to light the CANCEL reassurance indicator of only the originating callpoint. The latched reassurance is also available on screw terminal outputs for connection to an external over-bed call indicator (CM-D1). The version with call pendant socket incorporates a pendant removal alarm generating a call common to that of the pendant.

## On-site Programming

Call buttons are available in a number of standard colours and labels for use as various levels of alarms or system inputs (as determined by a system's programming).
