

- » Wide range of clear, concise coloured labels
- » Flush antibacterial soft touch silicone buttons
- » Reassurance lamp
- » Gold plated button contacts
- » Two level pendant removal alarm

Series Silicone Callpoints

The CPS-TBxx series are flush wall mountable callpoints with call button and optional pendant socket for use with Austco nurse/staff call systems to activate calls or input other conditions on the system. Call activation is by momentarily pressing the call button (labelled with its function) or from the optional plug in call pendant.

Easy to Identify and Use

The call button features soft touch, back-lit push button manufactured from silicone rubber with anti-bacterium additive as an infection control measure. The clear colours and concise labels enable easy and fast identification of the operation of each callpoint with a wide selection range to suit customer needs (AS 3811 Compliant).

The callpoint incorporates a separate CANCEL button that lights up bright red giving visual reassurance that a call has been placed. The version with call pendant socket also incorporates a pendant removal alarm that can be wired to be a common or separate call to that of the pendant. Removal of pendant can raise a call at the same level as the pendant or optional a higher level alarm.

On-site Programming

Call buttons are available in a number of standard colours and labels for use as various levels of alarms or system inputs (as determined by a system's programming).
