

# CANCEL CALLPOINT

A flush wall-mounted callpoint that cancels active calls on the TACERA Nurse Call System. It is typically used in conjunction with a ceiling-mounted pull cord callpoint where the CANCEL button cannot be reached, or where it is convenient to have one room-wide cancel button for multiple callpoints.

*IPnet compatible and net- or web-configured*

*Flush soft touch silicone button with anti-bacterial additive*

*Bright illumination when active for quick identification*

## LOWER "WHOLE-OF-LIFE" COSTS

The Cancel Callpoint is IP-based and features plug-and-play functionality. It is connected in series using only standard CAT5/6 cable that also provides POIPnet (Power Over IPnet).

Each callpoint has a unique MAC address and is supplied configured for immediate use. Once connected, the callpoint is quickly and easily assigned to a room using a web-browser, which simplifies the process and reduces the cost of installation and commissioning.

The system continuously checks the functionality of each device and will immediately notify maintenance staff if any problem is detected. The Cancel Callpoint is hot-swappable, making maintenance a breeze – simply replace a callpoint and then use a web-browser to quickly re-assign functionality to the new device.

## EASY TO IDENTIFY AND USE

This callpoint features soft-touch push buttons. The large CANCEL button is clearly labelled for easy and fast identification. The small button will illuminate red when a call is active, and users can easily cancel an active call by pressing either button.

All callpoints are connected on the IPnet patient area network to all other components of the TACERA system to initiate communication between nursing staff and patients.

## IMPROVED INFECTION CONTROL

This ergonomic callpoint is flush, wall-mounted with two buttons manufactured from silicone rubber with an anti-bacterial additive for improved infection control.

- The Cancel Callpoint fits into standard electrical wall boxes, reducing installation times and costs.
- Manufactured from an impact-resistant polycarbonate / ABS plastic blend, the callpoint features concealed fixings to maximise the life of the callpoint and reduce maintenance costs.
- Gold plated button-contacts prevent corrosion and ensure the callpoint is functional, maximising the life of the callpoint and reducing maintenance costs.
- Class B certification ensures the callpoint meets the new emission requirements for hospitals and aged care facilities.
