

ERGO^{PLUS} PATIENT CALL PENDANT

An ergonomically designed, easy-to-grip pendant for patients to activate calls on a TACERA Nurse Call System. The solid blue, water resistant case is non-slip and dip sterilisable, and is available with or without patient control of lights. The soft touch buttons are recessed to avoid accidental activation. The entire pendant is manufactured from silicone rubber with an anti-bacterial additive for improved infection control.

Large back-lit buttons

Reassurance indication

All-in-one design that is easy to grip

Non-slip case and linen clip to ensure it is always at hand for your patient

Improved infection control

EASY TO IDENTIFY AND USE

A simple patient pendant that provides your patient with a call button to activate calls on a TACERA Nurse Call System. It is available with or without patient control of lights.

The unique shape and ergonomic design fits comfortably in your patient's hand. Textured, coloured, back-lit buttons avoid confusion and assist sight impaired patients, especially at night and in low light conditions.

The buttons on the Ergo^{PLUS} Patient Call Pendant are easy to activate and are suitable for use by the infirm or patients with manipulative disabilities

LONG LASTING DESIGN

Manufactured from silicone rubber, the solid blue case has an all-in-one design that is robust and durable. The cable is manufactured from multi-strand, double insulated, white PVC cable and includes a large, smooth plastic linen clip that, together with the non-clip case, helps keep the pendant within easy reach of your patient.

The design of the moulded right-angle plug protects the callpoint socket, pendant plug and cable from damage should the cable be placed under severe tension, such as moving the bed with the pendant still connected.

IMPROVED INFECTION CONTROL

The pendant has an IP67 rating, allowing it to be dip sterilised for easy cleaning after patient use. The soft touch silicone case and buttons have an anti-bacterial additive for improved infection control.

- A pendant removal alarm ensures instant notification that a pendant is not available for your patient, reducing downtime.
- Suitable for use by left- and right-handed patients.
- The nurse call and light control buttons are large, backlit for ease of use at night, and with Braille dots on the CALL button for easy identification by the visually impaired.
- The non-slip case and large linen clip on the cable ensure that the pendant does not slip off the bed and is always at hand for your patient.
- Class B certification ensures the pendant meets the new emission requirements for hospitals and aged care facilities.
