

CALL PENDANT

A palm-sized, easy-to-grip pendant for patients to activate calls on a TACERA Nurse Call System. The button is available in a choice of colours and the entire pendant is manufactured from impact-resistant plastic that is durable and easy to clean.

- Palm-sized*
- Choice of button colour and cable length*
- Optional air pad activation*

EASY TO IDENTIFY AND USE

A simple pendant that provides your patient with a call button to activate calls on a TACERA Nurse Call System.

The palm-sized design fits comfortably in your patient's hand. The textured and coloured button assists sight impaired patients, and is easy to activate, making it suitable for use by the infirm or patients with manipulative disabilities.

OPTIONAL AIR ACTIVATION

An optional air pad pendant is available, which is a large 80 mm diameter soft touch, air-activated pad with cable for use by disabled patients or patients with reduced manual dexterity.

LONG LASTING DESIGN

The casing is manufactured from white, durable, impact-resistant plastic. The cable has a strong, moulded plastic, right-angle plug that connects to any callpoint with a 6.5 mm pendant socket.

The design protects the callpoint socket, pendant plug and cable from damage should the cable be placed under severe tension, such as moving the bed with the pendant still connected.

- A pendant removal alarm ensures instant notification that a pendant is not available for your patient, reducing downtime.
- Suitable for use by left- and right-handed patients.
- Class B certification ensures the pendant meets the new emission requirements for hospitals and aged care facilities.
